PROBLEM STATEMENT

HR teams and interviewers often face challenges in preparing relevant, structured, and standardized interview questions for different job roles and experience levels. Creating balanced technical and behavioral assessments manually is time-consuming and may lead to inconsistencies in candidate evaluation. This project develops an AI-powered Interview Question Generator that automatically creates role-specific interview questions, follow-up prompts, and evaluation criteria, helping organizations conduct more effective interviews and ensure fair candidate assessment.

SOLUTION OVERVIEW

The Interview Question Generator leverages Artificial Intelligence to simplify interview preparation. Users provide details such as job role, required skills, experience level, and interview type. Based on these inputs, the system generates a customized set of technical and behavioral questions along with follow-up questions and evaluation guidelines. The generated content assists interviewers in assessing candidates consistently while reducing preparation time and improving hiring efficiency.

KEY FUNCTIONALITIES

Role-Based Question Generation

Generates interview questions tailored to specific job roles and skill requirements.

Difficulty Level Selection

Creates beginner, intermediate, or advanced-level questions based on candidate experience.

Technical Question Generation

Produces domain-specific technical questions for skill assessment.

Behavioral Question Generation

Generates behavioral and situational questions to evaluate soft skills and problem-solving abilities.

Follow-Up Question Suggestions

Provides relevant follow-up questions to explore candidate responses in greater depth.

Evaluation Criteria

Offers assessment guidelines and scoring parameters for consistent candidate evaluation.

TOOLS & INTEGRATIONS

AI Assistant ChatGPT	Documentation & Reporting Microsoft Word	Data Input User Role & Experience Details
